I_H =Hold current: maximum current at which the device will not trip at 25°C still air reflow soldering of 260°C for 20 sec.
 I_T =Trip current: minimum current at which the device will always trip at 25°C still air reflow soldering of 260°C for 20 sec.
 V_{max} =Maximum continuous voltage device can withstand without damage at rated current
 I_{max} =Maximum fault current device can withstand without damage at rated voltage.
 T_{trip} =Maximum time to trip(s) at assigned current reflow soldering of 260°C for 20 sec.
 P_{dtyp} =Typical power dissipation: typical amount of power dissipated by the device when in state air environment.
 R_{min} = Minimum resistance of device in initial (un-soldered) state.
 R_{1max} =Maximum resistance of device at 25°C measured one hour after reflow soldering of 260°C for 20 sec.

Value specified is determined by using the PWB with 0.030" * 1.5oz copper traces.

Caution: Operation beyond the specified rating may result in damage and possible arcing and flame.

Solder Reflow Recommendation

Reflow -curve

Recommended reflow methods:IR,hot air oven ,nitrogen oven
 Devices can be cleaned using standard industry methods and solvents.

NOTE:

If reflow temperatures exceed the recommended profile,devices may not meet the performance requirements.

Caution: Operation beyond the rated voltage or current may result in rupture electrical arcing or flame

Packaging Quantity and Marking

Device	Standard Quantity (pcs)
SL0603150	4000

 CAUTION:

Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame. The devices are intended for protection against occasional over-current or over temperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated. Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
